Subject: RE: EMCC Tank Sampling @ VOPAK

External Notice: This email is from an external source.

Jill, Cecil, Tommy,

If not already in progress, in addition to the prioritized tank list, the rest of the EMCC product tanks at Vopak need to be sampled (running and top skim) and tested for sales specs and agreed extra testing as per Lab "TTC Fire Tank Quality" log as soon as possible. Please flag any off-spec result to me immediately.

A representative sample of each EMCC tank at Vopak should be kept for indefinite retention until further notice. Thank you!

Regards,

David Starke Holland Jr

External Notice: This email is from an external source.

Good Morning Jill,

Can you please let us know to where those samples have been taken and when do you expect to have a certification analysis been completed?

I'm sure David will also add and request some specific testing, but for now what would help us would be to get a visual result, as we are looking for ashes and other possible particles. If you find anything, pictures would also be very welcome.

Thanks again you and your Team for the help yesterday.

Regards

Yes sir, I just spoke with Dispatch regarding the below. We will take proper care to complete this task.

Idea is to sample a mix of tank farms, tanks with IFR and without and Tanks with nitrogen blanketed and without. Also, we took in consideration some of the grades that are single sourced out of Vopak and will have priority when operation is resumed.

This would help us a lot to have an initial understanding of current product quality, but probably we will want to sample and test all Tanks before that are unlocked for movement (inbounds and outbounds).

Buck, if any of this Tanks cannot be accessible that is ok and we would be happy with whatever you can do for now.

Jill, please take two representative samples and we would like to save them for an indefinitely period of time.

Thank you very much

Thanks!

And Buck, do you think we could get a few samples from some of our tanks? Team here would need something to have an initial understanding about our product quality.

If you think this could be possible whenever you all have a chance, please let me know how many would you think is feasible and we can have the Tank numbers ready for you. Idea would be to get a sample from maybe 10 out of the total 52 Chemical Tanks?
